

Supplemental Fig. S2: SPT5L AGO hooks are not mandatory for RdDM

A) Schematic representation and western blot analysis of **four independent** HA-tagged SPT5L/SPT+(1/2) and truncated SPT5Ltr/SPT-(1/2) variant lines. Coomassie staining is used as a loading control. B) Analysis of DNA methylation at Simple Hat, siRNA02, 5SrDNA loci into *nrpe1*, *spt5l*, Col-0, SPT+(1,2) and SPT-(1,2) lines. Genomic DNA was digested with the McrBC methylation sensitive enzyme and used as a template for PCR. Undigested DNA at the 5SrDNA was used as a loading control.
